

## MULTI-FUNCTION CORE SLEEVE WITH PUSH-IN ELECTRODES ©

This design features the push-in type port with hollow spring loaded pin electrode, so that it is reusable should the rubber sleeve deteriorate or fail during long term use.

Additionally the capillary contact micro-fibre packing can be easily removed from the hollow pins and repacked.

The site in the core sleeve is multi-functional so that it can be re-assigned to be a pressure port if the appropriate push-in insert is purchased.

### **NB**

The core sleeves are supplied **without** electrode assemblies, which are supplied separately and all parts of the assembly can be purchased separately as spares.
